

Introduction to git

Nano

nano filename : to open a file

Ctrl + o : to save the file

y - to save changes

enter - to exit nano

ctrl + x : to exit nano

Version Control with Git

- To view GIT VERSION

 `git --version`

- To check status of files in a directory

 `git status`

- To stage specific file or all at once

 `git add filename / git add`

- To Commit Changes

 `git commit -m "message here"`

- To preview changes of a file

 `git diff filename`

- to view most recent changes

 `git diff -r HEAD filename`

- in particular directory if there are multiple files with changes then to show difference between all files in staging area.

 `git diff -r HEAD`

Git Commit Structure

BLOB : Binary Large Object

Tree

Commit

Git Commands

- to view all commits

(`space_bar` to view info's in LOG and `q` to return to terminal)

- to restrict no. of commits displayed using -

- to only look at commit history of one file

- To customize the log OUTPUT

eg:

`git log —since = 'Apr 2 2002' # restores old version of file at mentioned date`

`git log —since='Apr 2 2002' —until='Apr 11 2022'`

Restoring an old version of a file

```
git checkout -- filename
```

- To revert to a version from a specific commit:

```
git checkout dc9d8fac mental_health_survey.csv
```

- This was the second to last commit, so another approach is:

```
git checkout HEAD~1 mental_health_survey.csv
```

Restoring a repo to a previous state

```
git checkout dc9d8fac
```

- Alternatively:

```
git checkout HEAD~1
```

Cleaning a repository

- See what files are not being tracked:

```
git clean -n
```

- Delete those files:

```
git clean -f
```

-  `git clean -f` cannot be undone!

To Show Commit

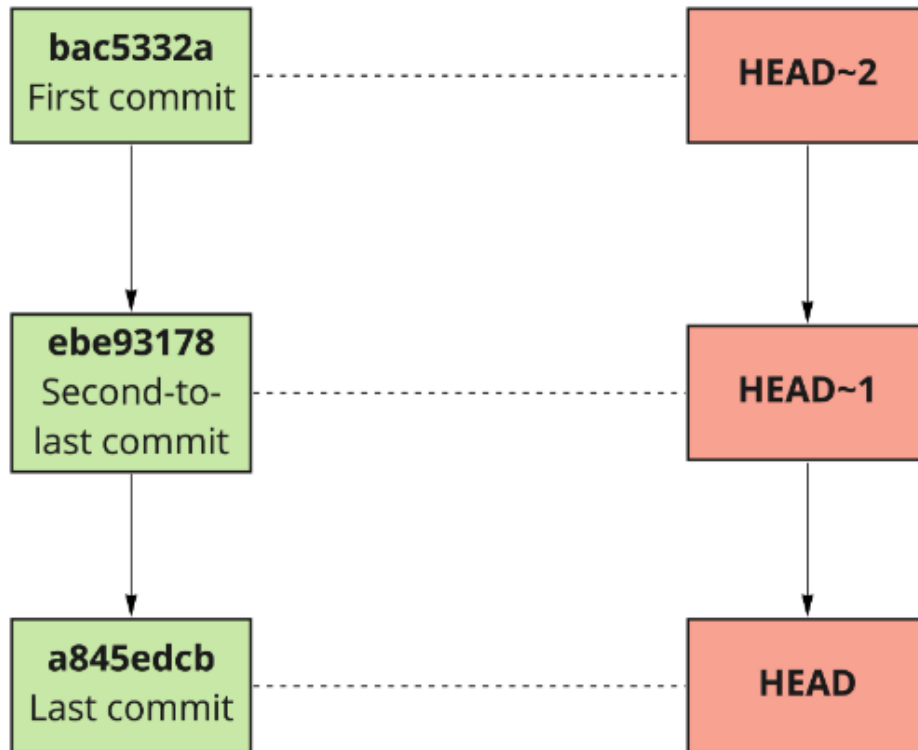

- to view changes made in that commit

`git show commit_hash`

Commit

HEAD

- to show last commit

 `git show HEAD`

- to show second last commit

 `git show HEAD~1`

numbers followed by space without space to view that commit in order

To View differences between commit

 `git diff commit_hash1 commit_hash2`

or, in this way

 `git diff HEAD~3 HEAD~2`

To show line by line changes and associated metadata

 `git annotate filename`

To unstages changes in a file

 `git reset HEAD filename`

To remove all files from staging area

 `git reset HEAD`

To undo changes made to unstaged file

 `git checkout — filename`

to undo changes made to all unstaged files

git checkout — .
